

A powerful new STEM Blueprint

The biggest changes happen when you invest in the system, not just programs

The Corporate STEM Coalition is a partnership between seven leading community, industry and government organizations who are working together to improve how STEM education investments are made in the Bay Area

Each school district develops a STEM Strategy to ensure all students have equal access to resources. Schools identify their goals, resource gaps and the support they need to execute the strategy.

The **County Offices of Education work together to identify existing resources** and consolidate them into one easily accessible digital location for schools in the nine Bay Area counties. Schools apply existing resources in a structured way, as a baseline for achieving their STEM goals.

Companies and Foundations fund any remaining investment gaps in the school's STEM strategies with financial resources and structured approaches for employee volunteerism.

In year one, the coalition will include 12-15 world-class companies and 4-5 leading foundations who will work together to align their current approaches to this more structured STEM investment process.
